Board Certified
American Board of Orthodontics

WELCOME

Braces make you beautiful!

Braces are appliances which apply gentle pressure to move teeth to their desired position. Orthodontics straightens teeth, brings bites into alignment, improves speech, appearance and function of your teeth. Orthodontics can be done on both children and adults, with excellent results!

Interceptive Orthodontics

Interceptive treatment takes place when patients have primary teeth or mixed dentition (baby and permanent teeth). It is a preventative treatment to avoid long-term problems. Some examples of interceptive treatment include: correction of thumb and finger sucking habits; guiding permanent teeth into proper positions through baby tooth removal or tooth size adjustment and gaining or holding space for permanent teeth. The goal is to reduce the severity of a developing problem and to avoid extraction of permanent teeth, and or surgical procedure.

Adult Orthodontics

Why is treatment important? It can help prevent or improve periodontal problems; help prevent or reduce further bone loss around teeth; improves ability of the dentist to restore missing teeth; improves aesthetics for a better smile and facial appearance; improves function of teeth; improves self-confidence and self-esteem; and improves oral health.

James T. Lee, D.D.S.

Board Certified Orthodontist

A Los Angeles native, Dr. Lee attended Hollywood H.S. and completed all of his education at the University of Southern California.

Following his graduation Dr. Lee served as a Clinical Associate Professor of Orthodontics at the USC School of Dentistry while opening his private orthodontic practice.

Currently he is a Delta Dental consultant and a peer review member. An excellent orthodontist skilled in the latest techniques, Dr. Lee is committed to helping his patients achieve their natural beauty through the art of orthodontics.
